

Technical and Professional Expertise and Innovation Delivered with a Personal Touch

Comprehensive Commissioning, Maintenance, Repair, and Service of High-voltage Systems

Professional Electric Power Systems Engineering

SPECIALTY ENGINEERING

Electric Power Systems, Inc. (EPS)

is a full-service consulting engineering firm that has specialized in all aspects of electric power system study, design, and construction management for over 20 years.

Specialty Engineering, Inc. (SEI)

has been reliably delivering a full-spectrum of testing, commissioning, maintenance, and repair services to substation, hydroelectric power system, and wind farm installation owners for over 30 years.

EPS and SEI are members of the commonly owned and managed Engineered Solutions Group, Inc. (ESG). This collaborative family of six consulting engineer, construction, maintenance, and right of way firms serves utility, industry, and government clients throughout the U.S. and across the Pacific Rim.

Comprehensive Cradle-Grave Power System Services

Troubleshooting and Repair

Rapidly evaluate and return equipment to service

Maintenance

Decrease downtime and cost with long-term scheduled maintenance services

Testing

Infrared surveys, protective relays, transformers, and all other substation components

Consulting and Planning

Engineered designs, construction management, and automation/integration

Alternative Energy & High Efficiency

Wind, hydro, solar, landfill gas, and heat to energy

Consulting Engineering

Complete power production to delivery systems study, design, and upgrade services covering all aspects of electric power systems from concept to completion

Construction

Substations, power lines, & UL 508A panels

Commissioning

Start-up services for your power systems and substations

**COOPER** Power Systems
